

CLAIMS

1. A wrapped-card assembly comprising a data-encoded card enclosed in a wrapping, said data encoded card comprising
5 confidential and non-confidential information in a visible form, wherein said wrapping comprises:

- 10 - an opaque area which covers at least partially the confidential information ;
 and
- a transparent area which covers at least partially the non-confidential information.

2. The wrapped-card assembly according to claim 1, wherein
15 the data encoded card comprises a main body which comprises the confidential information and an integrated circuit module which is detachable from the main body.

3. The wrapped-card assembly according to claim 1, wherein
20 the confidential information comprises a personal identification number and a personal unblocking key.

4. A method of manufacturing a wrapped card assembly comprising:

- 25 - a personalization step in which a data-encoded card which is provided with non-confidential information in a visible form, is further provided with confidential information in a visible form ; and
- 30 - a wrapping step in which the data-encoded card is enclosed in a wrapping that comprises an opaque area and a transparent area so that the opaque area covers at least partially the confidential
35 information and so that the transparent area covers at least partially the non
